Smith & Wesson

Crowd Control Equipment

Introduction

Smith & Wesson crowd control equipment has been designed with one purpose in mind. And that is to enable law enforcement officers to dominate and control dangerous situations with minimum risk to themselves and to the lives and property of others.

Today crowd control weapons are used in four basic situations. Most common and widely known is riot control and mob dispersion. With proper training a small, well equipped unit can control and disperse almost any dangerous mob. The armed criminal or insane person who barricades himself in a protected area is the second situation – and one of the most hazardous combat situations faced by the police officer. Third is control and discipline in prisons and other institutions. And the fourth is an alternative to deadly force for the individual officer. It is in this area that Chemical Mace® brand non-lethal weapons have been widely accepted throughout the free world.

Smith & Wesson chemical weapons are offered in two formulations, tear gas (CN) and irritant agent (CS). The effects of irritant agent (CS) closely resemble those of tear gas but are more severe. The severity causes the rioter to immediately and with a sense of panic vacate the area and lose all desire to continue any riotous activity. Although CS is a superior agent for grenades, projectiles and foggers, we do not recommend it in an aerosol irritant formulation because the low vapor pressure of CS formulation makes it necessary to actually project the stream into the troublemaker's eyes to be effective.

All Smith & Wesson chemical weapons are manufactured under extreme care and inspections to assure the utmost in quality and reliability. For example, an electronic fuse tester is used to measure delay, heat and burn pattern. Production samples are continuously subjected to rigorous environmental testing in specially designed chambers to insure operation under the most extreme weather conditions. Continuous testing and development in the critical blending area has resulted in the optimum blend of agent and fuel for reliability in the field.

The heritage of Smith & Wesson quality dates back to our first handguns of 1852. It's a heritage that lives on in each of the crowd control products offered by Smith & Wesson today.

Crowd Control Emergency Kits

Portable Riot Control Emergency Kit. The most useful tool in the small department's arsenal is this versatile kit. Complete in its fiberglas carrying case, this compact unit weighs just 30 pounds, is 33½ inches long, 14 inches wide and 5½ inches deep. The kit contains a Smith & Wesson 1½ inch (37 mm) gas gun, 4 Tru-Flite 37 mm penetrating projectiles, 6 long range 37 mm projectiles, 6 short range 37 mm shells and 4 continuous discharge grenades, plus a cleaning brush and a training manual. The grenades and projectiles are available in CN tear gas and CS irritant agent. You may select all one type or a combination of both.

Model 103 Mighty Midget Grenade Kit. Ideal for the small department, this compact, lightweight kit contains Smith & Wesson's pocket size version of the military grenade. Each kit contains 12 Mighty Midget Grenades with your choice of CN or CS, 12 Mighty Midget .38 Special launching cartridges and a universal revolver launcher to fit any .38 Special or .357 Magnum revolver. The kit, which measures 7½ inches by 11½ inches by 3½ inches, weighs just 5 pounds.

Model 103
Mighty Midget Grenade Kit

Pepper Fog® Tear Smoke Generator. The S&W Pepper Fog tear smoke generator is a complete tear gas and smoke arsenal in one compact, inexpensive package. The unit provides the effective output of thousands of cubic feet of CS or CN when and where you want it. Powered by a pulse jet engine the unit weighs less than 18 pounds and has the fuel capacity (regular gasoline) for 45 minutes of continuous operation. Each Pepper Fog tear smoke generator is supplied with an instruction manual and an adjustable shoulder sling.

Grenades, Projectiles and Shells

Continuous Discharge Grenade. Available with CN, CS or smoke loads, this versatile, multipurpose grenade may be either hand thrown or shotgun launched. Smith & Wesson manufactures a special 12-gauge launcher and cartridges. No. 2

Military Type Continuous Discharge Grenade. Popular and economical, this standard crowd control grenade is available in CN, CS or smoke. Designed for hand throwing only, the grenade has a military type pin safety. Firing lever minimizes familiarization time, simplifies training. No. 3

Blast Dispersion Grenade. For hand throwing only, this grenade is specifically designed for use when an immediate, nonflammable discharge of powdered CS or CN is required. Military type container is of nonfragmenting aluminum. No. 5

Rubber Ball Grenade. This innovative Smith & Wesson grenade virtually eliminates the possibility of throwback and minimizes chance of injury. Designed to be hand thrown or shotgun launched, this grenade burns very rapidly. Available in CN, CS and smoke. No. 15

Grenade Specifications (Typical)

Container	Aluminum	Aluminum	Aluminum	Aluminum	Plastic

Mighty Midget Grenade. A "pocket-sized" version of the military grenade, the Mighty Midget may be hand thrown – easily and accurately – or shotgun or revolver launched. Smith & Wesson makes special launchers and cartridges for use with 12-gauge shotguns, .38 caliber and .357 Magnum revolvers. Grenades are available in CS and CN. No. 98

Tru-Flite(TM) 37 mm Penetrating Projectile. For use in shoulder-type gas guns only,this fin stabilized hard rubber projectile is designed for situations that demand accuracy and penetrating ability. They'll group in a 4-foot circle at 50 yards and penetrate ⅝ inch plywood at 100 yards. Available in CS, CN and smoke. No. 12

Long Range 37 mm Projectile. Here's an economical, low recoil projectile for use in Smith & Wesson and most other 1½ inch gas guns. The projectile is available in 75 and 150 yard range models, with CS, CN or smoke loads. No. 17

Long Range 37 mm Rubber Projectile. Smith & Wesson has developed this low recoil projectile in 75 and 150 yard range models. The projectile fits Smith & Wesson and most other 1½ inch gas guns, is ideal when the situation calls for no external metal on the projectile, minimizing possibility of injuries. Available in CN, CS or smoke. No. 18

Short-Range 37 mm Shell. A "muzzle blast" shell, the Smith & Wesson short range shell projects a dense cloud of gas and smoke to a distance of 35 feet from the muzzle. The shell, which fits Smith & Wesson and most other 1½ inch gas guns, is available in CN, CS or smoke. No. 21

Tru-Flite(TM) 12-Gauge Barricade Piercing Projectile. Designed to be fired from 12-gauge police shotguns with 2¾ or 3 inch chambers, this Smith & Wesson projectile will penetrate ¾ inch plywood at 50 feet. Dissemination of agent in non-explosive, non-burning vapor completely eliminates fire hazard. Fin stabilized for accuracy, this projectile is available in CN or CS. No. 23

Gas Guns, Grenade Launchers and Launching Cartridges

Smith & Wesson 37 mm (1½ inch) Gas and Flare Pistol. Built on the frame of Smith & Wesson's largest and heaviest duty revolver, this pistol is designed to fire all S&W 37 mm (1½ inch) projectiles, (except for No. 12), and aerial flares. The pistol, of all steel construction with wooden grips, is capable of both double and single action. No. 209

Smith & Wesson 37 mm (1½ inch) Shoulder Gas Gun. Rugged and dependable, this S&W gas gun is built on the famous S&W all steel N frame. With a hardwood stock and rubber recoil pad. Capable of both single and double action, the gun will fire all Smith & Wesson and other 37 mm (1½ inch) projectiles. Barrel is detachable for compact storage. Weight is under 6 pounds, length 29 inches. No. 210

12-Gauge Launcher for Continuous Discharge Grenades. This heavy duty launcher is designed for use on Smith & Wesson and other 12-gauge police shotguns for launching S&W Continuous Discharge Grenades (Catalog No. 2). No. 33

12-Gauge Launcher for Rubber Ball Grenades. Specifically designed for use with the S&W Rubber Ball Grenade, this heavy duty launcher fits Smith & Wesson and other 12-gauge police shotguns. No. 36

12-Gauge Launcher for Mighty Midget Grenades. Designed to permit launching of Mighty Midget Grenades from 12-gauge police shotguns. No. 100

12-Gauge Launching Cartridges. Made in S&W's factory to the same exacting quality standards as famous Smith & Wesson shot shells, these cartridges are specifically designed for use with the continuous discharge and rubber ball grenade launcher. No. 35

12-Gauge Launching Cartridges for Mighty Midget Grenades. S&W designed and manufactured, these cartridges are specifically loaded for the accurate firing of the highly effective Mighty Midget Grenade. No. 102

.38 Special Mighty Midget Grenade Launcher. This specially designed launcher permits the firing of Mighty Midget Grenades from .38 Special or .357 Magnum revolvers. No. 99

.38 Special Launching Cartridge. Manufactured by Smith & Wesson for use with the .38 Special Mighty Midget Grenade Launcher. No. 101

Non-lethal Weapons

Law enforcement officers for more than 120 years have relied on Smith & Wesson to help them win and keep peace. In 1852, Horace Smith and Daniel Wesson established the high standards of skilled craftsmanship that have become a tradition at Smith & Wesson.

Today, law enforcement agencies, America's first line of defense against crime, face increasing requirements for greater personal protection and control over riots and civil disorders. Meeting their needs, Smith & Wesson has developed a broad range of non-lethal weapons.

Chemical Mace® Brand Non-lethal Weapons. In 1965, Chemical Mace® brand non-lethal weapons were made available to civil law agencies by a division of Smith & Wesson. Now, more than 400,000 Chemical Mace® brand non-lethal weapons are in service with over 4,000 police departments. These weapons have been used in more than 300,000 actual cases without one documented permanent injury.

There is more laboratory data supporting the safety and effectiveness of Chemical Mace® brand non-lethal weapons than for all other types of aerosol non-lethal weapons combined. And Smith & Wesson offers a wide range of Chemical Mace® brand non-lethal weapons to provide you with a model most closely tailored to your needs.

MK-V. More than a spray can, the MK-V is designed to orient in the hand like a handgun. You draw fast, aim quick and hit the target with a shotgun spray pattern – every time. A positive pushbutton safety locks to prevent accidental discharge, unlocks with the flick of your thumb. Always as ready as you are.

You reload quickly with MK-V replacement cartridges – simple and inexpensive. You can tell the percent of formulation remaining by the level indicator on the side of every cartridge.

The rugged, smooth leather holster snaps securely on your belt, keeps your MK-V tight to your hip. It comes in top grain cowhide in black or brown, with basket weave tooling on request.

MK-III and MK-III Professional. These pocket size weapons clip inconspicuously in any pocket. A shrouded two-position actuator has a positive twist-lock safety that prevents accidental discharge. You draw and discharge with one hand.

Worn by uniformed officers, policewomen and plainclothesmen alike, the MK-III models are designed for use both on and off duty. Level index on the side shows percent remaining after each use. Available in two sizes, both are designed for all-weather use.

MK-IV. The MK-IV is one of the nation's most popular and effective non-lethal weapons. Standard personal equipment, it is issued by thousands of police departments. The raised collar protects the trigger head to prevent unintentional discharge in emergencies or while holstered.

The MK-IV is provided with a low profile holster that fits close on your hip or mounts to your patrol car dashboard.

MK-VII. This Chemical Baton(TM) brand non-lethal weapon is a standard looking nightstick that carries an extra punch, provides double protection.

A Chemical Mace® brand dispenser is built right into the handle to let you discharge an accurate pattern of heavy spray.

Available in 12, 20 and 26 inch lengths, the MK-VII is guaranteed against breakage in normal use. Recessed in a high collar, the actuator is contoured for your thumb to increase accuracy and prevent accidental discharge. Replacement kits have two cartridges and a spare actuator.

MK-IX, Special Anti-riot Model. Wide spray and high flow rate make the MK-IX model ideal for controlling larger disturbances. Designed for use at distances in excess of 10 feet, the MK-IX rains the formulation downward in a ballistic curve to curb possible violent action before real trouble starts.

Usable in any weather, the formulation will not contaminate the area, and leaves no stain or residue. A grenade type pin safety with a large finger ring prevents inadvertent firing

The pebbled plastic cover gives your hand a firm grip, and the MK-IX is equipped with a rugged strap so you will not lose it – even in a scuffle.

Nightstick and Quick Release Holder. A basic tool for maintaining order, this classic nightstick is 23 inches long and weighs about 16 ounces.

Model B80: Nightstick holder only, black
Model 81: Walnut nightstick only
Model B81: Black nightstick only
Model 81A: Walnut nightstick and holder
Model 81B: Black nightstick and holder

These Smith & Wesson nightsticks are turned from specially selected fine grain hickory chosen for strength and balance, then handsomely finished in either walnut or black stain.

S&W's quick release holder with standard 2¼ inch loop keeps your stick securely on your belt. It cannot be snatched away. Designed for a fast cross draw, the snap release lets you free the nightstick instantly.

Leather Saps. Three sizes and weights let you choose the Smith & Wesson leaded leather sap suited to your needs.

Model B96S: Small, 8 oz.
Model B96M: Medium, 9 oz.
Model B96L: Large, 10 oz.

Crafted in top quality leather and securely stitched with waxed flax thread, these finely balanced saps fit your hand firmly and comfortably. Available in plain black only.

Personal Protective Equipment

Police Helmet. Smith & Wesson has designed a helmet with the special needs of the police officer in mind. Made of pressure molded fiberglas with polyester resin to meet Z90.1 impact standards, the helmet has a high impact, one piece molded liner with comfortable 8 point adjustable suspension. Removable visor permits attachment of optional face shield which can be worn with a gas mask. Mid length of neck area affords protection, yet provides full mobility and visibility for wearer. Lightweight, this Smith & Wesson helmet weighs just 40 ounces. No. 68

Gas Masks. Smith & Wesson offers the police officer a choice of either the full-vision mask or the chin type with a Clearvue face piece. The Model 66B full vision mask is designed to provide protection for the eyes and face. Large, shatterproof lenses provide full, wide angle vision, the molded rubber body provides an air tight seal without uncomfortable pressure. Protection against CS and CN gases are provided by two cartridges encased in a compact rubber boot. Model 67 employs a single shatterproof lens to permit panoramic vision; provides the same features and protection of Model 66. Replacement filters are available for Models 66B and 67 Gas Masks.

Barrier Vest(TM) Body Armor. Smith & Wesson's Barrier Vest is designed for regular use, routine situations. This vest is practical. In size. In weight. In protection. And in cost. It's not just for special situations, not just for the tactical squad. The Barrier Vest is for everyday use. And it saves lives, prevents injuries, even on those unpredictable domestic disturbance calls. Self-adhering Velcro fasteners make the vest quick and easy to put on. There are no buttons, buckles or belts.

Three models are available, all with Smith & Wesson's exclusive Barrier Cloth(TM) bonded to ballistic steel for maximum shock absorption and minimum weight.

Model 217 contains ballistic steel protection in both the front and back. Seven layers of Barrier Cloth are bonded to the steel in back, and ten layers in the front. Without the detachable groin protector the unit weighs just nine pounds. The groin protector, which also contains ten layers of Barrier Cloth bonded to ballistic steel, weighs just two pounds.

Model 120 features the same front construction as the Model 217. The back section contains no ballistic steel, but is composed of ten layers of Barrier Cloth. Model 120 uses the same groin protector as does Model 217. Designed for ultra-lightweight protection. Model 120 weighs less than 9 pounds without the groin protector.

Model 434 provides the ultimate in personal protection. Both the front and back sections include three plates of ballistic steel bonded to ten layers of Barrier Cloth. The groin protector, which also contains three ballistic steel plates and ten layers of Barrier Cloth, fastens with snaps. Model 434 weighs just 17 pounds without the groin protector and 22 pounds with the groin protector attached.

In ballistics tests at 25 feet, the front of Models 217 and 120 deflected or resisted .357 Magnum and lesser calibers of handguns including 9 mm Parabellum and 12-gauge rifled slugs. The back of Model 217 has been successfully tested against .357 Magnum and lesser caliber handguns. Model 120 has been tested against .38 Police Special and lesser caliber handguns, 12-gauge #4 shot and 00 buck. Model 434, in addition to the above, deflected or resisted .30 caliber carbine bullets in ballistic tests.

Non-lethal Weapons

Non-lethal Weapons

Law enforcement officers for more than 120 years have relied on Smith & Wesson to help them win and keep peace. In 1852, Horace Smith and Daniel Wesson established the high standards of skilled craftsmanship that have become a tradition at Smith & Wesson.

Today, law enforcement agencies, America's first line of defense against crime, face increasing requirements for greater personal protection and control over riots and civil disorders. Meeting their needs, Smith & Wesson has developed a broad range of non-lethal weapons.

Chemical Mace® brand non-lethal weapons

In 1965, Chemical Mace® brand non-lethal weapons were made available to civil law agencies by a division of Smith & Wesson. Now, more than 400,000 Chemical Mace® brand non-lethal weapons are in service with over 4,000 police departments. These weapons have been used in more than 300,000 actual cases without one documented permanent injury.

There is more laboratory data supporting the safety and effectiveness of Chemical Mace® brand non-lethal weapons than for all other types of aerosol non-lethal weapons combined. And Smith & Wesson offers a wide range of Chemical Mace® brand non-lethal weapons to provide you with a model most closely tailored to your needs.

MK-V

More than a spray can, the MK-V is designed to orient in the hand like a handgun. You draw fast, aim quick and hit the target with a shotgun spray pattern — every time. A positive pushbutton safety locks to prevent accidental discharge, unlocks with the flick of your thumb. Always as ready as you are.

You reload quickly with MK-V replacement cartridges — simple and inexpensive. You can tell the percent of formulation remaining by the level indicator on the side of every cartridge.

The rugged, smooth leather holster snaps securely on your belt, keeps your MK-V tight to your hip. It comes in top grain cowhide in black or brown, with basket weave tooling on request.

MK-III and MK-III Professional

These pocket size weapons clip inconspicuously in any pocket. A shrouded two-position actuator has a positive twist-lock safety that prevents accidental discharge. You draw and discharge with one hand.

Worn by uniformed officers, policewomen and plainclothesmen alike, the MK-III models are designed for use both on and off duty. Level index on the side shows percent remaining after each use. Available in two sizes, both are designed for all-weather use.

MK-IV

The MK-IV is one of the nation's most popular and effective non-lethal weapons. Standard personal equipment, it is issued by thousands of police departments. The raised collar protects the trigger head to prevent unintentional discharge in emergencies or while holstered.

The MK-IV is provided with a low profile holster that fits close on your hip or mounts to your patrol car dashboard.

MK-VII

This Chemical Baton™ brand non-lethal weapon is a standard looking nightstick that carries an extra punch, provides double protection.

A Chemical Mace® brand dispenser is built right into the handle to let you discharge an accurate pattern of heavy spray.

Available in 12, 20 and 26 inch lengths, the MK-VII is guaranteed against breakage in normal use.

Recessed in a high collar, the actuator is contoured for your thumb to increase accuracy and prevent accidental discharge. Replacement kits have two cartridges and a spare actuator.

MK-IX, special anti-riot model

Wide spray and high flow rate make the MK-IX model ideal for controlling larger disturbances. Designed for use at distances in excess of 10 feet, the MK-IX rains the formulation downward in a ballistic curve to curb possible violent action before real trouble starts.

Usable in any weather, the formulation will not contaminate the area, and leaves no stain or residue. A grenade type pin safety with a large finger ring prevents inadvertent firing.

The pebbled plastic cover gives your hand a firm grip, and the MK-IX is equipped with a rugged strap so you will not lose it — even in a scuffle.

Leather Saps

Three sizes and weights let you choose the Smith & Wesson leaded leather sap suited to your needs.

Model B96S: Small, 8 oz.
Model B96M: Medium, 9 oz.
Model B96L: Large, 10 oz.

Crafted in top quality leather and securely stitched with waxed flax thread, these finely balanced saps fit your hand firmly and comfortably. Available in plain black only.

Nightstick and Quick Release Holder

A basic tool for maintaining order, this classic nightstick is 23 inches long and weighs about 16 ounces.

Model B80: Nightstick holder only, black
Model 81: Walnut nightstick only
Model B81: Black nightstick only
Model 81A: Walnut nightstick and holder
Model 81B: Black nightstick and holder

These Smith & Wesson nightsticks are turned from specially selected fine grain hickory chosen for strength and balance, then handsomely finished in either walnut or black stain.

S&W's quick release holder with standard 2¼ inch loop keeps your stick securely on your belt. It cannot be snatched away. Designed for a fast cross draw, the snap release lets you free the nightstick instantly.
